Consolidates multiple entities into a single powerful database

Centralizes ERP business processes

Enhances financial visibility

Is embedded within Microsoft Dynamics GP (cloud or on-premise)

Multi-Entity Management

Advantages of using Multi-Entity Management
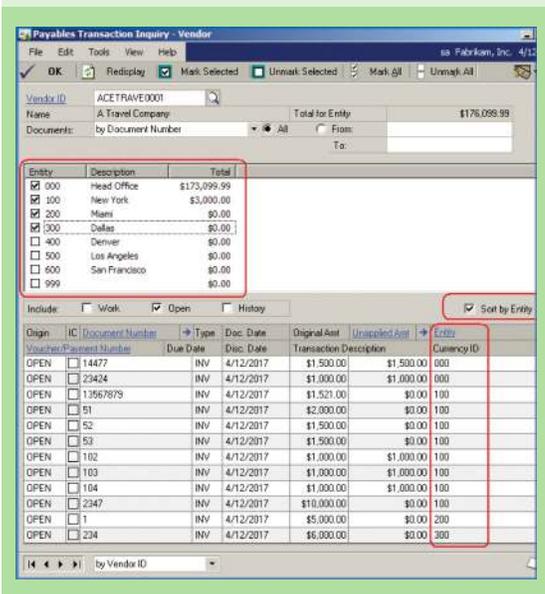

Flexible For Your Operations

Operate in decentralized or centralized mode with processing functions such as AP, AR, payroll, SOP, POP, and more

One Single Database

Efficiently deliver complex business processes in Dynamics GP from different entities within a single database and eliminate the need to log in and out of several single entity databases

"I don't know why anyone would set up multiple databases in Dynamics GP after seeing Multi-Entity Management from Binary Stream."

Scott McFarland, President of Control Tower Consulting

Centralized Payment Processing

Allows for a corporate head office or parent entity to send one check to a vendor for all entities including itself with proper intercompany distributions during payment processing.

Centralized Receipt Processing

Corporate head office or parent entity can apply a single receipt from one customer to all entities including itself with proper intercompany distributions during receipt processing.

Centralized Payroll Processing

Process payroll for the entire organization that is paid through a central cash account.

Fully Automated Intercompany Processing

Intercompany entries posted with the originating transactions with full audit trail for posted/voided/ corrected entries as well as performing Intercompany entries for transactions such as transferring fixed assets between entities, transferring inventory between entities and bank transfers between entities.

Centralized Invoicing

Bill from a corporate head office or parent entity and fulfill stock from other entities.

Centralized Purchase Order Processing

Process a single purchase order for multiple entities and receipt for one entity or multiple entities.

### Create Arms Length Transactions

A sales invoice for entity A that is a payables invoice for entity B can be created using Multi-Entity Management.
